Date:	Dec 8, 2023

Installing Local for Hosting

- Head over to Locals website to install their application to your computer: <https://localwp.com/help-docs/getting-started/installing-local/>
- Download the option according to your operating system
- Follow all prompts and allow access should any firewall prompts arise

Importing the Website to Local for Hosting

- Open Local
- Click the + located in the bottom left to add a Local Site
- Click select an existing file and upload the zipped file containing the WordPress website
 - Alternatively you can drag the zip file to the screen for easy upload
- Click continue, and then Import Site
- You should see the website present on the left hand side of the screen under Local Sites

Accessing the Website

- Click into the website from the options under Local Sites
- In the top right hand side there should be a green triangle that says Start Site, click this
- Wait for the website to start up
- If you want to see and use the website from from a user point of view, click Open Site. This will open the website in whatever your default browser is
- If you want to enter the backend for editing, click WP Admin. This will open the WP Login in your default browser, login and you should be presented with the WordPress Dashboard
