

## Project Status report

Name:	Brooklyn Coulson
Community (UN SD goal):	Non-Profit organizations within Saskatchewan. Mainly goals 4 and 17, however all goals will be featured in the project.
MVP #	1
Sprint cycle dates:	Nov 2, 2023 and Nov 16, 2023

Project Name	Initiative Insights: SDG Navigator
Blurb	Creating a website to help non-profits identify SDGs that align with their programs/initiatives, provide integration examples and additional resources. All of the SDGs will be featured in the website, however goals 4 and 17 will be the main focus. At the moment, I am using Local to work on the project, and am using the base version of Elementor since they only charge annually despite showing monthly rates. The digital community is just forming since all of the communities/tools that exist are not designed for non-profit organizations. The community will feature open boundaries and the main community orientations are content and service context. In regards to other orientations, there will be access to expertise through the examples and additional resources and individual participation with the surveys.
For Week Ending	November 2, 2023
Project Status	Green
Status Description	I received feedback regarding the prototypes of the web pages and made minor adjustments. I have created the website and have gotten the skeletons of the pages created with minimum styling. The logo, font styles, and colour palette have been determined. I have created the initial taxonomies for the filtering of the resources and examples (these can be added to later as needed). I've received a multitude of potential resources from Colleen that could be included in the website; she's also given some insight on some potential value added questions to include in the surveys.

### Activities—During the past sprint cycle

- Reviewed the prototypes with Victor (1 minor adjustment)
- Created the website and basic skeleton of the pages
- Started to develop branding components (logos, fonts, colours)
- Created base taxonomies for the resource and example filtering
- Received an email from Colleen containing potential resources and survey questions to be included
- Started to explore filter plugins

### Project Issues

- Elementor Hosting (along with pro) charges annually despite advertising monthly payments
- I have not reached out to potential testers yet

### Project Changes

- On the home page, I moved the 3 navigation buttons above the SDG explanation and will include an anchor to the SDG explanation section if the user wants to know more
- Hosting locally for now instead of paying a years worth of hosting up front

## Activities—Planned for Next Week

- Explore form plugins
- Draft up some questions and get opinions from Colleen, Victor, Adam (hopefully Donna)
- Refine the styling on the website
- Attend the SDG workshop next Wednesday to try and network for potential testers

## Reflection

Do you feel "on track"?

Yes, I feel as though the project is coming along well.

What progress do you particularly feel good (great) about?

Having some resources to start with, the opportunity to network next week and having the skeleton up and running on WordPress.

What barriers (if any) do you feel is/are a current impediment to success?

The fact Elementor is wanting a years worth of payments upfront, this impedes access to some plugins I was planning on using.

What help (if any) do you require to move positively forward?

I was going to see if I could potentially play around with the Search & Filter Pro plugin that Tim has access to in order to see if it's worth me purchasing in the future.

What questions or concerns do you have (if any)?

If you still have access to Search & Filter Pro, am I allowed to play around with it?

How would you like me to address the code requirement on GitHub since I'm using WordPress?

---
